**STOMATOLOGY DIATHERMY COAGULATOR**

*Claims*

1. A stomatology diathermy coagulator comprising a power transformer, a rectifier built about semiconductors diodes, a smoothing filter, a mains filter and a patient's filter for suppression of interference with radio reception, an instrument holder, a set of cutting and coagulation instruments, *characterized in that*, in order to avoid burns and electric shocks which could be suffered by the patient during operation of the device, the latter has an electrical circuitry that eliminates the need for a "passive" electrode to be applied to the patient's body, such as a circuitry including a self-excited oscillator built about a layout of a quartz self-oscillator with an electronic coupling, and with the quartz crystal connected between the screening grid and the control grid of the electron tube.
